World Crop Production

WCP-7-85
July 1985

PRODUCTION HIGHLIGHTS FOR 1985/86

WHEAT: World production for 1985/86 is estimated at a record 514.5 million tons, down 2.6 million or less than 1 percent from last month, and virtually the same as last year. Important changes from a month ago include the following:

- **United States** — Production is estimated at 65.3 million tons, down 1.2 million or 2 percent from last month and down 8 percent from last year.

- **USSR** — Production is estimated at 83.0 million tons, down 4.0 million or 5 percent from last month but up 14 percent from last year. The decline in production resulted primarily from a decrease in expected spring wheat yields.

- **Argentina** — Production is estimated at 11.5 million tons, down 0.6 million or 4 percent from last month and 13 percent from last year's bumper crop. A decline in projected plantings resulted in a decrease in the production estimate.

- **EC-10** — Production is estimated at 70.2 million tons, up 1.2 million or 2 percent from last month but down 8 percent from last year's record crop. Favorable weather resulted in an increase in estimated yields in France and West Germany. In Greece, unfavorable weather resulted in a decline in expected yields. A reduction in estimated area resulted in a decline in production in Italy.

- **East Europe** — Production is estimated at 37.9 million tons, up 0.8 million or 2 percent from last month, but down 9 percent from last year's record crop. Larger crops are expected in Poland and Yugoslavia because of favorable weather.

U.S.D.A.
AGRIC LIBRARY

- **Pakistan** — Production is estimated at 11.6 million tons, up 0.6 million or 5 percent from last month and 6 percent from last year's outturn. Higher than expected yields in the Punjab region resulted in an increase in estimated production.

- **Morocco** — Production is estimated at 1.8 million tons, up 0.3 million or 18 percent from last month, but down 8 percent from last year's harvest. Favorable weather during the late grain filling and harvest periods resulted in an increase in estimated yields.

COARSE GRAINS: World production for 1985/86 is estimated at a record 825.4 million tons, up 9.2 million or 1 percent from last month and 2 percent from last year. Important changes from a month ago include the following:

- **UNITED STATES** — Production is estimated at 249.5 million tons, up 5.3 million or 2 percent from last month and 5 percent from last year.

- **EC-10** — Production is estimated at 72.4 million tons, up 1.9 million or 3 percent from last month, but down 3 percent from last year's record harvest. Favorable weather resulted in an increase in estimated barley yields in France and West Germany. In West Germany, a larger corn area resulted in an expected increase in production.

- **Other W. Europe** — Production is estimated at 28.2 million tons, up 1.3 million or 5 percent from last month, but down 1 percent from last year's record crop. The barley production estimate in Spain was raised because of favorable weather and an expected increase in yields.

- **East Europe** — Production is estimated at 69.6 million tons, up 1.1 million or 2 percent from last month but down 6 percent from last year's record crop. Production estimates were raised for Poland and Czechoslovakia because of favorable weather and improved yield prospects.

- **Thailand** — Production is estimated at 5.3 million tons, up 0.4 million or 8 percent from last month and up 12 percent from last year's crop. The rise in estimated corn production resulted from an increase in area and yields.

- **USSR** — Production is estimated at 95.0 million tons down 1.0 or 1 percent from last month, but up 10 percent from last year. The decrease resulted from a slight decline in expected spring barley yields.

- o Canada — Production is estimated at 23.9 million tons, down 0.2 million or less than 1 percent from last month, but up 9 percent from last year's drought-reduced harvest. Lower estimated area for rye and oats resulted in a decrease in the crop estimate.

RICE (MILLED-BASIS): World production for 1985/86 is projected at a record 319.7 million tons, up 0.2 million or less than 1 percent from last month and up 1.6 million or less than 1 percent from last year's crop. Important changes from a year ago include the following:

- o United States — Production is projected at 4.0 million tons down 0.4 million or 9 percent from last year's crop.
- o Indonesia — Production is projected at 26.5 million tons, up 0.7 million or 3 percent from last year. Both area harvested and yield are expected to rise slightly.
- o India — Production is projected at 60.0 million tons, up 0.5 million or less than 1 percent from last year's crop.
- o Bangladesh — Production is projected at 15.0 million tons, up 0.5 million or 3 percent from last year. The increased outturn is attributed to an expected rise in planted area.
- o Thailand — Production is projected at 12.4 million tons, up 0.4 million or 3 percent from last year's crop. The increased output is attributed to an expected rise in area.
- o Japan — Production is projected at 10.2 million tons, down 0.6 million or 6 percent from last year. Yields are expected to decline from last year's bumper level.

OILSEEDS: World production for 1985/86 is estimated at a record 188.4 million tons, up 2.4 million or 1 percent from last month and last year's record. U.S. production is estimated at 59.5 million tons, down 0.9 million tons or less than 1 percent from last month, but less than 1 percent above last year. Foreign production is estimated at 128.9 million tons, up 2.9 million or 2 percent from last month and 2 percent above last year's record.

* Soybeans: World production for 1985/86 is estimated at 92.7 million tons, up 2.0 million or 2 percent from last year. Important changes from a year ago include the following:

- o **United States** Production is estimated at 51.7 million tons, up 1.1 million or 2 percent from last year. Area is reported down since prices for U.S. soybeans remain weak in comparison with grains, especially corn and sorghum.

- o **Argentina** Production is estimated at a record 7.0 million tons, up 0.4 million or 6 percent from the past year. Planted area is forecast to increase by 3 percent while yields are forecast up from last year's drought depressed level.

- o **China** Production is estimated at 10.0 million tons, up 0.3 million or 3 percent from last year. Area is estimated to have increased 4 percent, primarily in southern growing areas.

- o **Brazil** Production is estimated at 16.4 million tons, down 0.3 million or 2 percent from the past year's record. Although the government of Brazil has not announced production support policy for 1985/86, the current low price of soybeans and the government's announced intention to emphasize food grains are expected to discourage soybean production. Both area and yields are forecast to decline marginally.

* Cottonseed: World production for 1985/86 is estimated at 29.9 million tons, down 2.8 million or 9 percent from last year's revised record of 32.7 million. Important changes from a year ago include the following:

- o **United States** Production is estimated at 4.3 million tons, down 0.4 million or 8 percent from last year. Area is reported down as a result of weak cotton prices.

- o **Brazil** Production is estimated at 1.2 million tons, down 0.3 million or 23 percent from last year's record. Area is forecast down 17 percent as cotton prices remain low. Yields are also forecast lower than last year's record.

- o **China** Production is estimated at 8.3 million tons, down 2.0 million or 19 percent from last year's record. Government procurement and price policies are designed to reduce cotton area. Yields are forecast to be less than last year's record. Even with these changes, the 1985/86 crop is forecast to be second only to last year's record.

- o **Pakistan** Production is estimated at 1.7 million tons, down 0.3 million or 14 percent from last year's record. An irrigation water shortage is expected to reduce production.

- o USSR — Production is estimated at 5.0 million tons, up 0.3 million or 6 percent from last year. Area is estimated slightly less than last year, but yields are expected to improve from last year.

* Peanuts: World production for 1985/86 is estimated at a record 21.1 million tons, up 1.5 million or 7 percent from last year. Important changes from a year ago include the following:

  - o United States — Production is estimated at 1.9 million tons, down 0.1 million or 7 percent from last year's record.
  - o China — Production is estimated at a record 5.4 million tons, up 0.6 million or 12 percent from last year. Area, primarily in the North China Plain, is expected to increase as government policy emphasizes cash crops.
  - o India — Production is estimated at 7.0 million tons, up 0.5 million or 8 percent from last year. Yields are forecast above last year's level.

* Sunflowerseed: World production for 1985/86 is estimated at a record 18.0 million tons, up 0.2 million or 1 percent from last year's record. Important changes from a year ago include the following:

  - o United States — Production is estimated at 1.5 million tons, down 0.2 million or 15 percent from last year. Planting intentions indicate area is substantially lower than last year.
  - o France — Production is estimated at a record 1.2 million tons, up 0.3 million or 30 percent from last year's record. Area is estimated up 22 percent as a result of high EC prices. Yields are forecast above last year's 5-year low of 1.86 tons per hectare.
  - o USSR — Production is estimated at 4.9 million tons, up 0.4 million or 9 percent from last year. Area is reported up marginally; however, improved weather in the major growing areas indicates improved yields.

* Rapeseed: World production for 1985/86 is estimated at a record 17.5 million tons, up 1.0 million or 6 percent from last year's record. An important change from last year is the following:

  - o China — Production is estimated at 5.3 million tons, up 1.1 million or 25 percent from last year. Winter rapeseed area increased dramatically in response to declining domestic stocks, and the government's obligation to purchase all available production.

* Flaxseed: World production for 1985/86 is estimated at 2.3 million tons, up 0.1 million or 5 percent from last year.

* Copra: World production for 1985/86 is estimated at 4.6 million tons, up 0.2 million or 5 percent from last year.

* Palm Kernels: World production for 1985/86 is estimated at 2.3 million tons, up 0.1 million or 6 percent from last year's record.

* Palm Oil: World production for 1985/86 is estimated at 7.5 million tons, up 0.7 million or 10 percent from last year's record.

COTTON: World production for 1985/86 is estimated at 78.0 million bales, up 2.3 million or 3 percent from last month but down 8 percent from 1984/85. Foreign output is estimated at 65.5 million bales, up 1.8 million or 3 percent from last month but down 9 percent from a year ago. U.S. production is estimated at 12.5 million bales, up 0.5 million or 4 percent from last month but down 8 percent from 1984/85. Important changes from a year ago include the following:

- o Australia — Production is estimated at 965,000 bales, down 0.2 million or 14 percent from last year. Last season's poor yields are likely to result in reduced dryland plantings this year.

- o China — Production is estimated at 22.5 million bales, down 5.4 million or 19 percent from last year. The decrease in estimated output is mainly due to an area decrease. The government has imposed strict measures aimed at reducing cotton output, improving quality and reducing excessive stock levels.

- o Mexico — Production is estimated at 850,000 bales, down 0.4 million or 31 percent from last year. Planted area is estimated down sharply, particularly in the northwest, due to low cotton prices.

- o Pakistan — Production is estimated at 4.0 million bales, down 0.6 million or 14 percent from last year's record level. The estimated decrease in output is due to a corresponding decrease in planted area and inadequate water supplies.

- o Turkey — Production is estimated at 2.4 million bales, down 0.3 million or 10 percent from last year. Producers, dissatisfied with last year's support prices and government payment policy, planted substantially less cotton this season.

- **USSR** — Production is estimated at 12.3 million bales, up 0.6 million or 5 percent from last year. Increased output is anticipated due to bonuses for high-quality cotton and a return to more hand-picking, coupled with structural changes which have facilitated coordination at the local and national levels.

- **Brazil** — Production is estimated at 3.0 million bales, down 0.9 million or 22 percent from last year's record level. Production prospects are down sharply due to a forecast area decrease.

This report draws on information from USDA's global network of agricultural attaches and counselors, official statistics of foreign governments, other foreign source materials and results of office analysis. Estimates of U.S. acreage, yield and production are from USDA's Crop Reporting Board, except where noted. All numbers in this report are based on unrounded data and detail may not add to totals because of rounding.

This report was prepared by the Foreign Production Estimates Division (FPED), FAS/USDA, Washington, D.C. 20250. Further information may be obtained by writing to the Division or by calling (202) 382-8888.

WORLD AGRICULTURAL WEATHER HIGHLIGHTS

Date July 9, 1985

1/ Includes total of wheat, coarse grains, and rice (milled) shown above. Estimates of Soviet total grain production, including wheat, coarse grains, rice (rough), minor grains, and pulses are 190 mil. tons in 1983/84, 170 mil. in 1984/85, and 190 mil. forecast in 1985/86.

2/ Totals for major regions and countries and other countries include the six major oilseeds shown elsewhere in this report, while world and total foreign also include copra and palm kernels for countries shown plus other countries.

Note: Entries of '.0' indicate no reported or insignificant production.

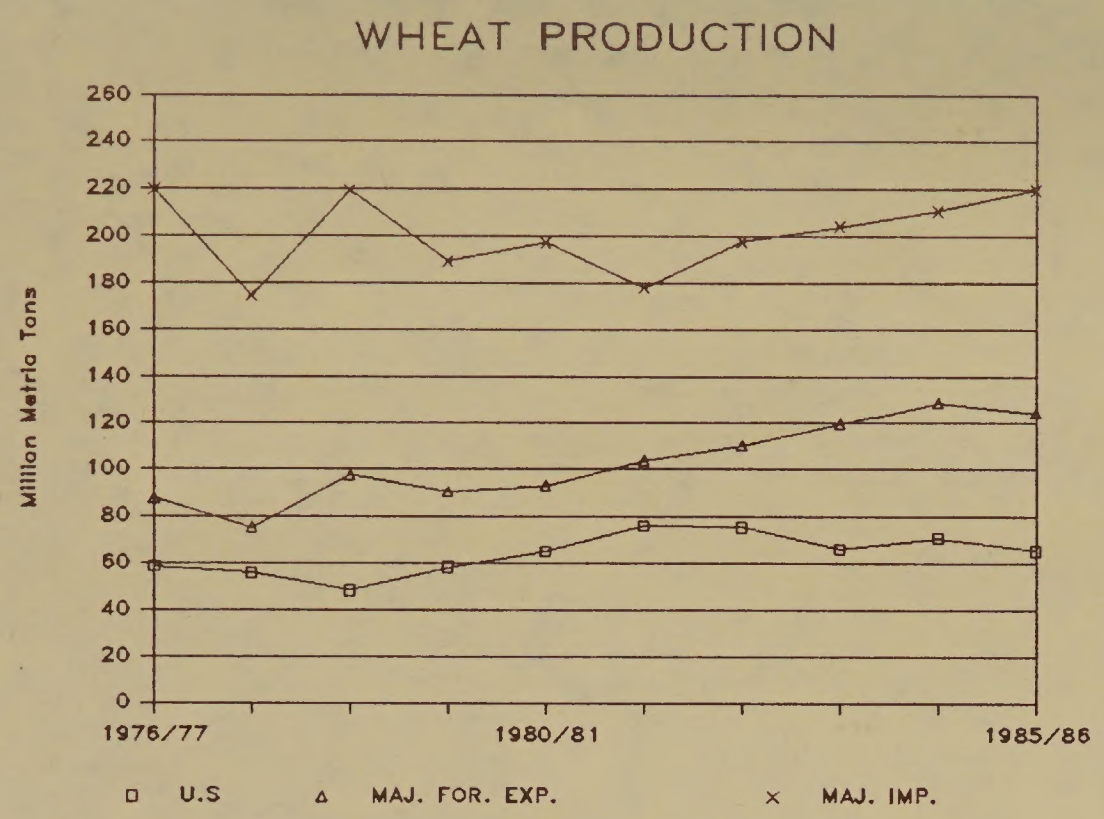
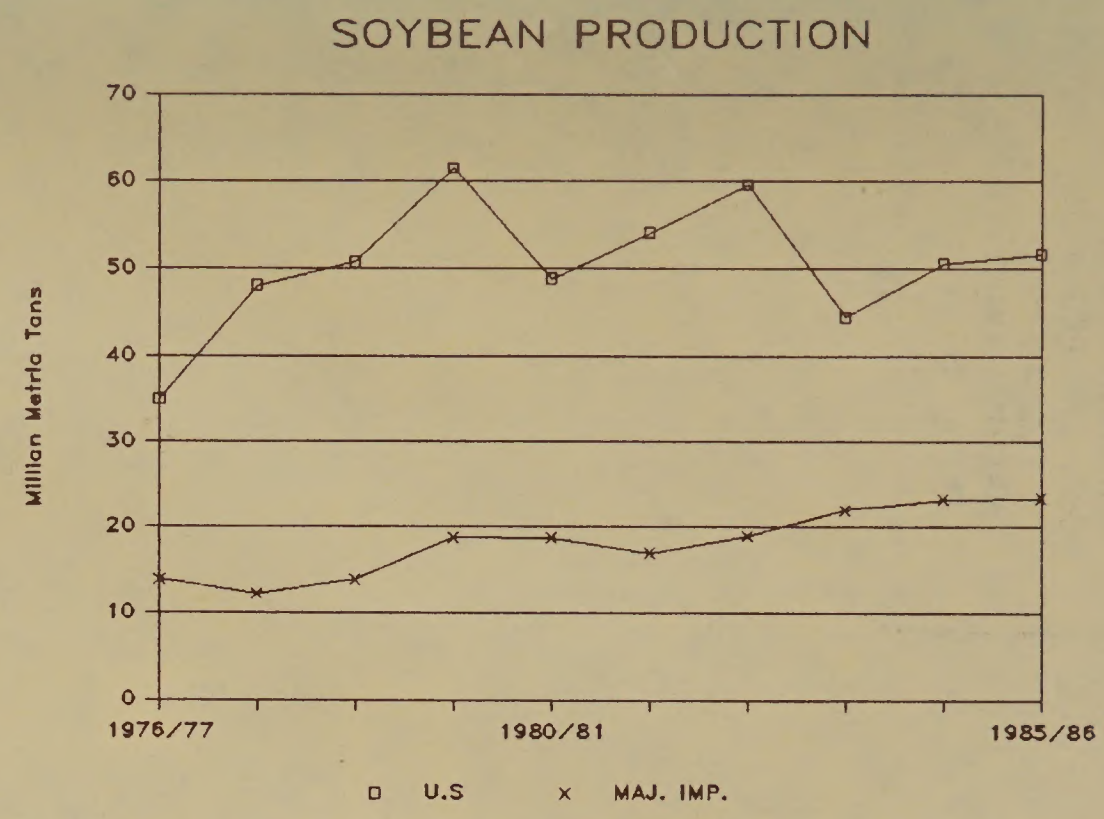
1/ Dash (-) represents less than 500,000 tons. 2/ May not add up to 10 if July estimate was the same as final.
3/ Ten year record of the difference between July forecast and the final estimate is based on EC-9 estimates from 1975/76-1980/81 and EC-10 estimates from 1981/82-1984/85.
Note: Standard errors of the estimates are derived from 10 year production trends, 1975-1984; percent error is calculated at the mean. The 10 year record is based upon absolute differences from final estimates.

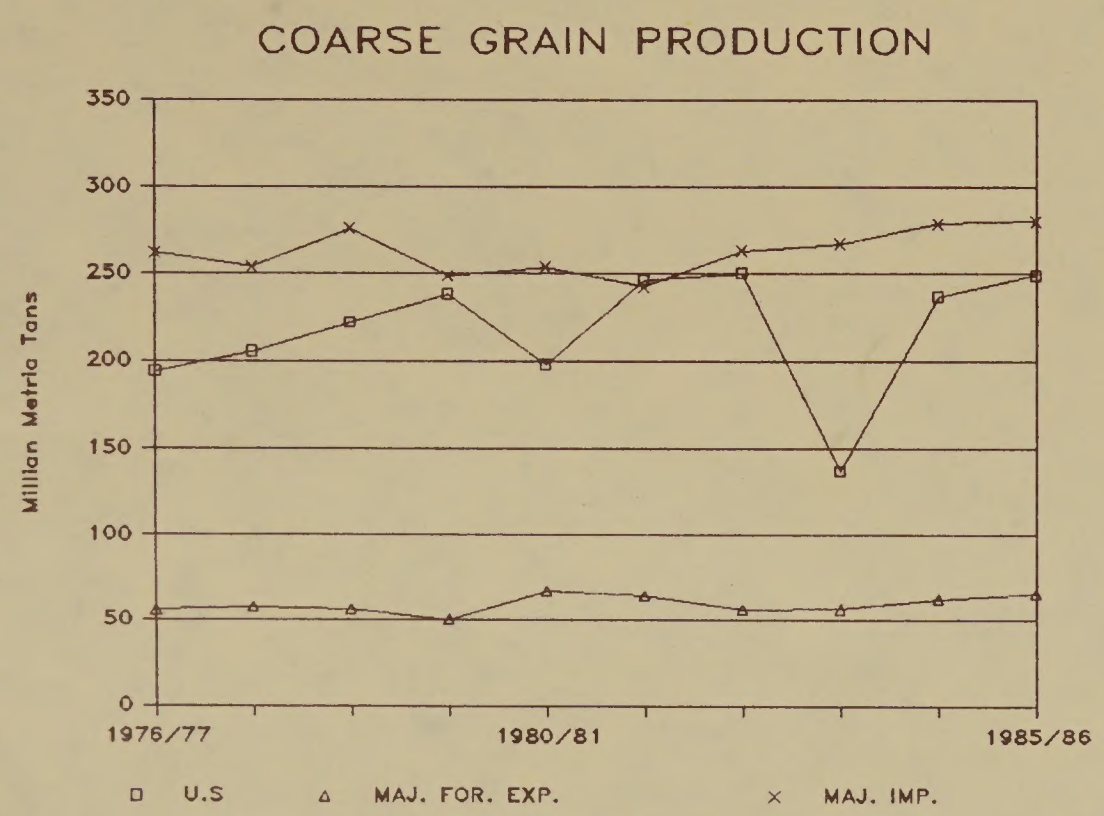
WHEAT PRODUCTION



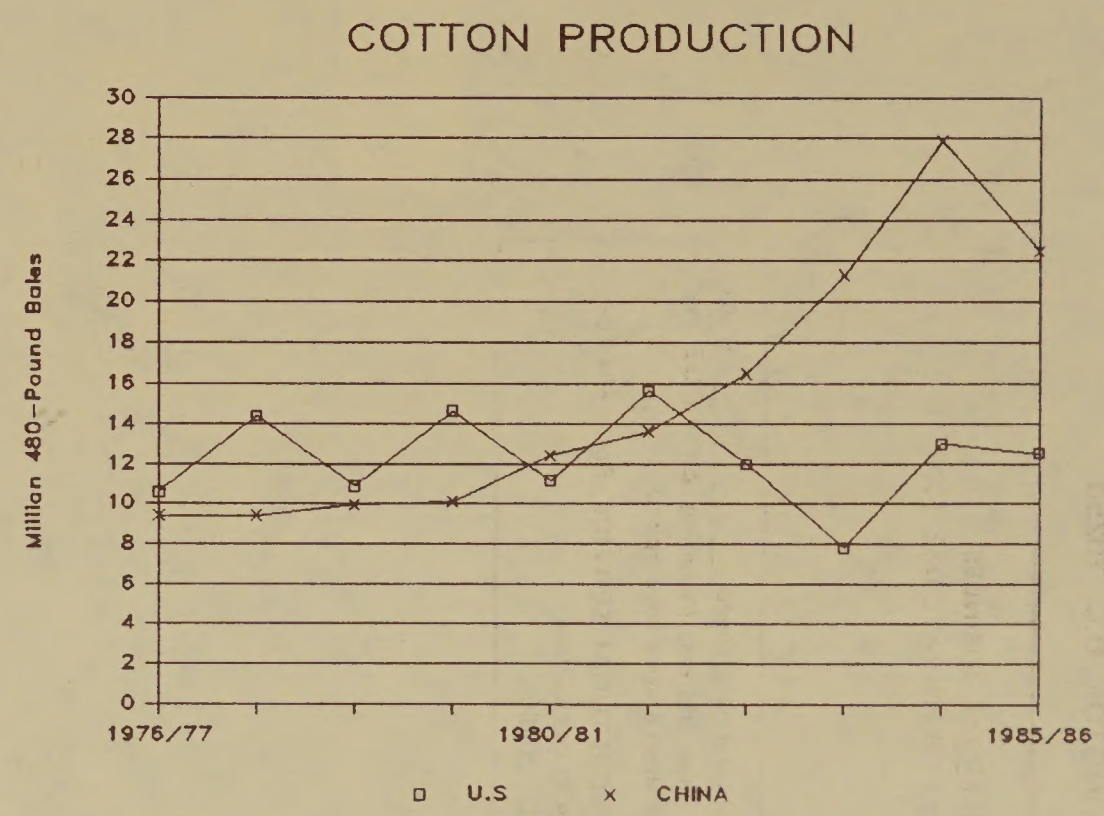
SOYBEAN PRODUCTION



COARSE GRAIN PRODUCTION



COTTON PRODUCTION



July 1985

FOREIGN PRODUCTION ESTIMATES DIVISION, FAS, USDA

This month's graphical analysis provides comparisons of long-term production patterns for wheat, coarse grain, soybeans and cotton for the period 1976/77 to 1985/86 (forecast). The major foreign exporter and importer categories, presented in the wheat, coarse grain, and soybean graphics, are defined in the respective commodity tables.
